[Book a Call](#)

With 9+ years of experience in the software industry, I am seeking a Frontend (or Frontend-heavy Fullstack) role in a small to mid-size organisation. In addition to the required expertise in Software Development, I bring knowledge of UX and automation from my previous roles.

Skillset

Web and Frontend: HTML/CSS, JavaScript, TypeScript, ReactJS, NextJS

Backend and Middleware: C++, Python, NodeJS, Supabase

UI/UX: Product Discovery, Ideation, Design Systems

Tools: Git, Figma, VSCode, Cursor

Work Experience:

Freelance

Self-Employed | Dec 2023 – Present

Highlights:

- **Slicely** [Demo](#) | [Github](#)
A concept app to help you annotate and process PDFs with the help of AI automation
Tech: NextJS, Supabase, OpenAI APIs and Embeddings, Tailwind
- **Figma Variable Explorer plugin** [Live](#) | [Github](#)
A tool built using ReactJS for Figma. > 5000 users are currently using it.
Tech: ReactJS, Figma APIs
- **Website for UX Audit Agency** [Live](#)
A static website with support for markdown blogs.
Tech: AstroJS
- **Notes in Google Docs:** [Live](#) | [Github](#)
A Raycast extension built on top of Google Cloud APIs will allow users to take notes from the native interface and sync them on their Google Cloud. Users: ~250

GoodCode (goodcode.us)

Software Development and UX | Dec-2022 to Nov-2023 | Remote

Highlights

- I led the UX work for 10+ clients in the product discovery, wireframing, and design review phases, shipping clean, intuitive, and futuristic user experiences for their products.
- Designed user experiences for dashboards, tables, and other data-intensive components for SaaS products in the security sector and acquired domain knowledge.

- I worked with the design team to migrate our design system from Figma Styles to Figma Variables, making it future-proof. Query (query.ai)

Senior Software Engineer | Sept-2020 to Sept-2022 | Remote

Highlights:

- I worked on a module (Python/Flask) that extracted and transformed data from various security data providers via APIs.
- Led the Integration development efforts for the products from the Microsoft suite.
- I worked on a client-side module to handle the business logic for QueryAI Federated search functionality implemented in ReactJS.
- Integration Test framework implementation for the driver module mentioned above

Tools: Python, Typescript, ReactJS

Bluejeans Networks by Verizon (bluejeans.com)

Senior Software Developer | July-2016 to Sept-2020 | Bengaluru, India

Highlights

- Brainstormed and Implemented an automation framework pipeline to manage ~50 automation jobs across various clients the product supported. This was the first of its kind and later became the key tool for the QA teams across the company.
- Launched a Mac app to support whiteboard and annotation during conferencing.
- Introduced new features and APIs for screen-share and network resiliency in a native module written in C++ for multiple platforms (Windows, OSX, Linux, Android, iOS)
- Led a team to win a hackathon with a project aimed at improving user experience during screen sharing

Tools: C++, Java, Swift, Selenium, Jenkins, Slack Bot APIs, NodeJS, Git

Education

Indian Institute Of Information Technology, Allahabad, U.P., India (2011-2015)

B.Tech in Electronics and Communications, GPA: **8.6/10**

St. Anthony's Senior Sec School, Udaipur, Rajasthan (2008-2010)

Intermediate(Science), Score: **89.50%**

Awards and Certifications:

- Founders Choice Award, Bluejeans Annual Hackathon 2019
- Star Performer award. 2017
- Joy of React certification [Link](#) | ReactJS

Interests and Side Quests:

I love to read and try new tools and products, so I started a newsletter, "[Weekly Finds with Mohit](#)", to share with everyone.
